## Tyre Performance:

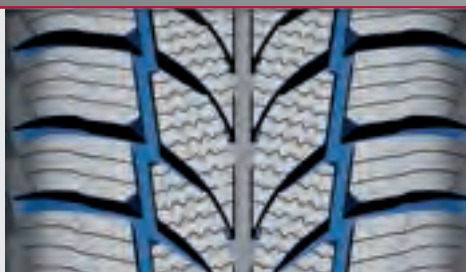

— Altimax Winter Plus  
— Altimax A/S 365

### Good traction and braking performance in dry conditions

Solid shoulder blocks arranged in a longitudinal direction improve traction and braking performance. This results in short stopping distances on dry roads.

### Good aquaplaning prevention

Wide, lateral grooves optimise effective water dispersal from the tread. This results in greater protection against aquaplaning.

### Very good grip on snow

Sipes in the middle of the tread pattern and a high number of gripping edges make the tyre highly flexible. This achieves very good grip on snow and excellent braking performance.
